

Wydział Chemii Uniwersytetu Mikołaja Kopernika w Toruniu

Zaprasza na

Seminarium wydziałowe

pod tytułem:

**DESIGN AND SYNTHESIS OF ELASTIN-MIMIC
SEQUENCES OF POLYPEPTIDES: THERAPEUTIC
APPLICATIONS OF THEIR BLENDS WITH
COMMERCIALLY AVAILABLE POLYMERS**

które wygłosi

Prof. Mahesh Basavaraju

Department of Chemistry, JSS Academy of Technical Education,

25.10.24 (piątek) o godzinie 10:00

w Bibliotece Wydziału Chemii

Abstract

Polymer blends are promising materials that are revolutionizing tissue engineering due to their ability to imitate the extracellular matrix and promote cell proliferation and differentiation. They find applications in both medical and non-medical domains. In this context, (a) the synthesis of elastin-like polypentapeptide, (b) their miscibility characteristics with commercially available polymers, and (c) their thermal characteristics are discussed. Furthermore, an effort is made to discuss the applications of these novel blends in wound healing. The results advocate for the promising applications of these novel materials in biomedical fields
